BCS APPROVED INSPECTORS – 1 JULY 2020 EDITION

STANDARD CLAUSES for plan checking procedure

Screenshot taken from homescreen of BCS Database

Screenshot taken from homescreen of BCS Database

ClauseNo	Clause	BCS note to Plan Checker
SC1	PART A: Submit full and relevant calculations relating to this	
	project which meets the above requirement (A1,A2 & A3 as	
	applicable)	
SC2	PART A: Any Steel or Timber beams must be provided with	
	adequate end bearings (as per structural engineers design)	
SC3	PART A: Support over any new openings shall be fitted in	
	accordance with structural engineers details or Manufacturer's	
	specs.	
SC4	PART A: You must submit the most recent updated plans and	
	engineers calculations - specifications as soon as possible.	
SC5	PART A: Changes to structural engineers member layouts,	
	connections or any other arrangements deviating from your	
	originally submitted design must be notified to your engineer	
	for assessment, and updated details forwarded to building	
	control as they occur.	
SC6	PART A: Depths of foundations must be assessed by your	
	Qualified Engineer prior to submission to building control. Tree	
	roots or other sub-structure that may affect the depth or the	
	suitability of foundations proposed must be evaluated by your	
	professional advisors. Submit compliant designs.	
SC7	PART A: Use of gallows brackets to support chimney flues may	
	not be acceptable when used on lime bedded brickwork. Your	
	Engineer must submit alternative support solutions that are	
	compliant.	
SC8	PART A: Any Steel or Timber beams must be provided with	
	adequate end bearings (as per structural engineers design. It is	
	your responsibility to check that all bearings and connections	
	are correctly provided.	
SC9	PART A: Steelwork must be provided with suitable coatings	
	which help provide corrosion protection	
SC10	PART A: Steelwork should be protected from fire by	
	encasement or application of coatings which meet the fire	
	resistance requirements contained in the Approved	
	Documents.	
SC11	PART A: Timber is not a suitable support member in close	
	proximity to chimney flues or hearths. Please submit	
	alternative support solutions or methods of protection from	
	heat damage.	
SC12	PART A: Submit details of trees, their proximity, height and	
	species - showing also how your foundations have been	
	designed to account for potential damage due to tree root	
	activity.	
SC13	PART A: A ground bearing concrete floor slab is not	Used particularly when a
		foundation is excavated
	permissible. Submit your alternative designs (i.e. suspended	beyond 1.5m into clay
		soils and ground may
	flooring)	heave etc
SC14	PART A: Submit a soils investigation report carried out by a	
	qualified engineer which assists in justifying your foundation	
	designs.	
SC15	PART A: Submit details which demonstrates how requirement	
-	A3 - Disproportionate collapse- has been met in your design.	
SC16	PART A: Double up timber floor joists beneath new	
	partitioning.	
	O-	I .

SC17	PART A: [CFA /Driven/Piling] Pile foundation design logs must	
	be submitted which records final depths, sizes, and grid	
	position layout positions. You must submit testing information	
	as appropriate (Integrity Test / Maintained Load Test - Report	
	Outcomes)	
SC18	PART A: Pile foundation design for proposals shall be	
	submitted from a qualified engineer.	
SC19	PART A: Basement reinforced concrete designs must be	
	submitted from qualified engineer together with a	
	construction method statement which assists site staff carrying	
	out your proposals.	
SC20	PART A: Basement formation for habitable use- You are	
	advised to submit your design proposals detailing protection	
	measures of occupied structure from water ingress,	
	condensation or vapour damage.	
SC21	PART A: Adequacy of existing foundations to support new	
	applied loads must be diligently proven by your engineer.	
SC22	PART A: Adequacy of existing elements (i.e. lintels, partitions,	
	existing beams) to support newly applied loads must be	
	diligently proven by your engineer.	
SC23	PART A: All new foundations must be formed or excavated so	
	as to not cause damage to drains passing through or alongside	
5004	them.	
SC24	PART A: [Lateral / Vertical Restraint] Submit details which show	
	how columns or frames are to be laterally stabilised as	
	appropriate (i.e. to resist wind load or other de-stabilising	
6625	forces)	
SC25	PART A: I am not satisfied that the proposed foundations are	
	suitable for your on site conditions. Submit your justifications	
	or an alternative compliant foundation design carried out by a	
SC26	Chartered Civil / Structural Engineer.	
3C26	PART A: PARTIAL UNDERPINNING may result in future structural movement affecting the adjoining foundations that	
	have not underpinned. You client should be so advised.	
SC27	PART A: BEAM BEARINGS - You must make sure that your	
3027	contractors provide beam end bearings into or onto supporting	
	walls or other structure in accordance with your compliant	
	structural engineering designs.	
SC28	PART A: FOUNDATIONS ANTI-HEAVE MATERIALS -a foundation	See also SC13
3020	design requiring anti-heave protection measures and a	366 di30 3613
	suspended floor is required. Please submit your designs.	
SC29	PART A: EXTERNAL WALL INSULATION (EWI) - The fixing	CHECK IF INSULATION IS
0025	system of EWI system must be adequately designed to deal	ACTUALLY BEING APPLIED
	with predicted loads, including the weight of the system itself.	TO THE OUTER WALL
	Guidance on how to achieve this is provided in paragraphs 3.3-	SURFACE !!
	3.8 of the Approved Document A. This includes undertaking	
	suitable design calculations.	
SC30	PART A : PART B : External balconies - shall be designed with	
	suitable materials that do not propagate and allow fire to	
	spread over the external facades of the building. Submit	
	information and any associated fire performance showing	
	compliance with the building regulations.	
SC31	PART A: Free text: See note below	
SC32	PART A: Free text: See note below	
SC33	PART A: Free text: See note below	
1		i.

SC34	PART A: Free text: See note below	
SC35	PART A: Structural Design summary	
	The Institute of Structural Engineers (in Feb. 2015) advises	
	that you should submit to Building Control Bodies a design	
	summary with every submission which contains the following,	
	if relevant:	
	a list of the structural design codes with which it complies	
	an explanation of the basis of design. This requires sufficient	
	detail to allow others to understand the structural principles	
	used	
	the class of the building for purposes of disproportionate	
	collapse design (Table 11 of Approved Document A). If the	
	building is in a number of classes, describe the division	
	• a description of the measures taken to guard against	
	progressive collapse	
	• a description of the load path to the foundations and how	
	lateral stability is achieved (with illustrations as required to	
	give sufficient clarity)	
	• the name of the organisation, or individual, who has overall	
	responsibility for the stability of the structure as required by	
	the design codes	
	• a schedule of the software used, and for what purpose;	
	confirming that its application and limitations are understood	
	and that the results have been verified	
	a statement of the qualifications of the person undertaking	
	the design, whether the design has been subject to any in-	
	house or third party checking, and the name and qualifications	
5636	of the person doing that checking	
SC36	PART B; PASSIVE PROTECTION- Any recessed lights proposed must not cause ceiling fire or sound resisting performances to	
	be prejudiced.	
SC37	PART B; PASSIVE PROTECTION- You have not specifiied level of	
3037	fire resistance or Class rating of surfaces being used as walls	
	and ceilings. Submit information which complied with ADB Part	
	B2.	
SC38	PART B: ACTIVE PROTECTION- COMMERCIAL PREMISES :	
3636	smoke detection alarms, escape lighting and wayfinding layout	
	details must be submitted which have been designed in	
	accordance with relevant British Standards cited within the	
	approved documents.	
SC39	PART B: ACTIVE PROTECTION- RESIDENTIAL - Provide	
	interlinked mains operated, battery backed smoke / fire	
	detection to all habitable rooms and circulation spaces	
	throughout this building.	
SC40	PART B: ACTIVE PROTECTION- RESIDENTIAL - Your open plan	
	ground floor layout is not complaint with building regulations.	
	Either erect a fire resisting partition re-introducing a protected	
	escape route leading to the final exit or submit your alternative	
	proposals i.e. residential water mist (meeting BS8458) or	
	residential sprinkler system (meeting BS9251) or mechanical	
	fire resisting curtaining (meeting BS8524). Proposals involving	
	these systems must be accompanied by an independently	
	prepared Fire Strategy Report.	
· · · · · · · · · · · · · · · · · · ·		·

SC41	PART B: ACTIVE PROTECTION- RESIDENTIAL -Provide	
	interlinked smoke detection (mains powered/battery backed)	
	to circulation spaces in compliance with the approved	
	documents. An interlinked mains powered with battery back-	
	up heat detector is recommended within kitchens.	
SC42	PART B: ACTIVE PROTECTION- RESIDENTIAL DWELLING HOUSE -	
	Your proposal will result in a floor(s) above 7.5m of the	
	external ground level. Submit your proposals for alternative	
	escape from those levels or a BS9251:2005 residential sprinkler	
	system and/or a Fire Safety Engineered proposal which	
	proposes how you will comply with relevant building	
	regulation requirements. Proposals involving these systems	
	must be accompanied by an independently prepared Fire	
	Strategy Report.	
SC43	PART B: ACTIVE PROTECTION- RESIDENTIAL SPRINKLERS-	
	Where residential sprinklers are required, sprinkler protection	
	throughout the building should be provided. However, where	
	the sprinklers are being installed as a compensatory feature to	
	address a specific risk or hazard it may be acceptable to	
	protect only part of a building. You must submit a FIRE	
	ENGINEERS report to justify your proposals.	
SC44	PART B: ACTIVE PROTECTION- RESIDENTIAL SPRINKLERS-You	
	are required to provide a sprinkler system to BS 9251:2005,	
	throughout your building. Proposals involving these systems	
	must be accompanied by an independently prepared Fire	
	Strategy Report.	
SC45	PART B: PASSIVE & ACTIVE- REGULATORY REFORM ORDER	
	2005 - These premises are subject to the requirements of the	
	Fire Safety Order. A Fire Risk Assessment must be in place at	
	completion of your project, and a Fire Safety Information pack,	
	where you must prove that it has been handed over to	
	Responsible Person (as defined under the Fire Safety Order	
	2005).	
SC46	PART B: PASSIVE PROTECTION- FLATS- Buildings not fitted with	
	fire mains -There should be vehicle access for a pump	
	appliance to small buildings (those of up to 2000m2 with a top	
	storey up to 11m above ground level) to either:	
	a. 15% of the perimeter; or b. within 45m of every point on the	
	projected plan area (or 'footprint', see AD-Diagram 48) of the	
	building; whichever is the less onerous. There should be	
	vehicle access for a pump appliance to blocks of flats to within	
	45m of all points within each dwelling.	
SC47	PART B: PASSIVE PROTECTION- Provide fire stopping between	
	compartment lines to same standard as required by adjacent	
	construction.	
SC48	PART B: PASSIVE PROTECTION- RESIDENTIAL - Fire Safety- Your	
	proposed internal layouts are not complaint with building	
	regulations. Submit a layout which shows a fully protected	
	escape route leading to a final exit.	
SC49	PART B: PASSIVE PROTECTION- RESIDENTIAL All internal fire	
	doors shall be rated min. FD20 (fire doors), to enclose upon	
	and forming part of a protected route leading to a final exit.	
	You are required to submit fire test performance certificates	
	for all fire doors to be fitted that proof compliance with Part B	
	Fire Safety requirements.	
-		

front entrance fire doorset rated FD30 , provided with both smoke seals, intumescent strips, spring self closing device. Internal doorsets shall be rated minimum FD20 leading into habitable rooms. You are required to submit fire test performance certificates for all fire doors to be fitted that proof compliance with Part B Fire Safety requirements. SCS1 PART B: PASSIVE PROTECTION - Separating floors and walls must provide 30 MINUTES of fire resisting performance which shall include any fire stops, around light fittings, ducts, or pipes. You may also be required to make sure that PART E - (Sound) performance complies. SCS2 PART B: PASSIVE PROTECTION - Separating floors and walls must provide 60 MINUTES of fire resisting performance which shall include any fire stops, around light fittings, ducts, or pipes. You may also be required to make sure that PART E - (Sound) performance complies. SCS3 PART B: PASSIVE PROTECTION - Separating floors and walls must provide 90 MINUTES of fire resisting performance which shall include any fire stops, around light fittings, ducts, or pipes. You may also be required to make sure that PART E - (Sound) performance complies. SCS3 PART B: PASSIVE PROTECTION - Separating floors and walls must provide 90 MINUTES of fire resisting performance which shall include any fire stops, around light fittings, ducts, or pipes. You may also be required to make sure that PART E - (Sound) performance complies. SCS4 PART B: PASSIVE PROTECTION - Submit details which shows complaint compartmentation design meeting the relevant performance requirements contained within the approved documents. SCS5 PART B: PASSIVE PROTECTION - Travel distances along your escape routes are excessive. Submit altered designs which meet maximum travel distances contained within the approved documents of the submit after safety engineered package design which shows alternative complance. SCS6 PART B: TRAVEL DISTANCES for means of escape in case of fire - Your plans have insufficient details that show compliant travel	SC50	PART B: PASSIVE PROTECTION- RESIDENTIAL FLATS - Provide	THIS PARTICULAR CLAUSE
smoke seals, intumescent strips, spring self closing device. Internal doorsets shall be rated minimum FD20 leading into habitable rooms. You are required to submit fire test performance certificates for all fire doors to be fitted that proof compliance with Part B Fire Safety requirements. SC51 PART B: PASSIVE PROTECTION - Separating floors and walls must provide 30 MINUTES of fire resisting performance which shall include any fire stops, around light fittings, ducts, or pipes. You may also be required to make sure that PART E - (Sound) performance complies. SC52 PART B: PASSIVE PROTECTION - Separating floors and walls must provide 60 MINUTES of fire resisting performance which shall include any fire stops, around light fittings, ducts, or pipes. You may also be required to make sure that PART E - (Sound) performance complies. SC53 PART B: PASSIVE PROTECTION - Separating floors and walls must provide 90 MINUTES of fire resisting performance which shall include any fire stops, around light fittings, ducts, or pipes. You may also be required to make sure that PART E - (Sound) performance complies. SC53 PART B: PASSIVE PROTECTION - Separating floors and walls must provide 90 MINUTES of fire resisting performance which shall include any fire stops, around light fittings, ducts, or pipes. You may also be required to make sure that PART E - (Sound) performance complies. SC54 PART B: PASSIVE PROTECTION - Submit details which shows complaint compartmentation design meeting the relevant performance requirements contained within the approved documents or submit a fire safety engineered package design which shows alternative complance. SC55 PART B: PASSIVE PROTECTION - Travel distances along your escape routes are excessive. Submit altered designs which meet maximum travel distances contained within the approved documents or submit a fire safety engineered package design which shows alternative complance. SC60	PART B: PASSIVE PROTECTION - ROOFLIGHTS : should meet the	
	following classifications, according to material. No guidance for	
	European fire test performance is currently available, because	
	there is no generally accepted test and classification	
	procedure.	
	a. Non-plastic rooflights should meet the relevant classification	
	shown in the AD Part B	
	b. Plastic rooflights, if the limitations in Table 4.2 and Table	
	12.2 are observed, should be a minimum class D-s3, d2 rating.	
	Otherwise they should meet the relevant classification in Table	
	4.1.	
SC61	PART B: SMOKE VENTILATION- COMMERCIAL PREMISES :	This clause to be used on
	Submit plan layouts which will allow a statutory consultation	buildings that are places
	with the Fire Brigade. Their comments if any may affect your	of work !!
	final proposals. All smoke control systems should be handed	
	over to the end user with a complete set of documentation.	
	Natural / mechanical / pressure differential systems : These	
	These systems should be automatic actuating. Manual control	
	points for stair automatic opening vents (AOV) should consist	
	of one manual control point at ground or access floor and be	
	sited in the stair. These installations must be provided with	
	adequately protected power supplies and backup power. All	
	smoke control systems should be handed over to the end user	
	with a complete set of documentation.	
SC62	PART B: SMOKE VENTILATION- Common circulation spaces -	This clause may be
	stairways must be provided with suitable smoke ventilation	applied to buildings
	(natural or mechanical) in compliance with the approved	containing flats
	documents or cited British Standards contained therein. These	(dwellings)
	systems should be automatic actuating. Manual control points	
	for the stair automatic opening vents (AOV) should consist of	
	one manual control point at ground or access floor and be	
	sited in the stair. These installations must be provided with	
	adequately protected power supplies and backup power. All	
	smoke control systems should be handed over to the end user	
	with a complete set of documentation.	
SC63	PART B: SMOKE VENTILATION- Lobby ventilation details	
	required which demonstrates compliance with the Approved	
	Documents or cited British Standards contained therein.	
SC64	PART B: EXTERNAL WALL ENVELOPE CLADDINGS of any height	
	or use - You have not specified the fire related performance of	
	wall claddings. Please note that you must justify the	
	performance irrespective of building height. You must submit	
	third party certified test data that justifies your choice of	
	materials especially where a non-traditional construction form	
	has been adopted.	
SC65	PART B: Escape lighting (to BS5266) shall be provided to cover	
	all common fire escape route (internal common escape routes	
	and externally if applicable) all in accordance with the	
	approved documents and British Standards.	

SC66	PART B4 (FIRE SPREAD) -Claddings or other external finishes - in relation to buildings of any height or use, consideration should be given to the choice of materials (including their extent and arrangement) used for the external wall, or attachments to the wall, to reduce the risk of fire spread over the wall. Submit your justifications which meet the requirements contained within Part B Fire Safety. Your will be required to submit appropriate third party test certificates to help justify your designs.	
	neip justify your designs.	
SC67	PART B: INTERNAL FIRE SPREAD -The following classification of wall lining must be achieved these should be marked upon your plans: Small rooms of maximum internal floor area of 4m2 Garages (as part of a dwellinghouse) of maximum internal floor	This clause to be used on dwellings !!
	area of 40m2 - Classification Rating of D-s3, d2	
	Other rooms (including garages) & Circulation spaces within a	
	dwelling - Classification Rating of C-s3, d2	
	Other circulation spaces (including the common areas of blocks	
	of flats) - Classification Rating of B-s3, d2 Refer to	
SC68	Approved Document Part B for details. PART B: ESCAPE WINDOWS - your windows at first floor (floor	To be used on DWELLING
3008	·	HOUSES, also BLOCKS OF
	not exceeding 4.5m above ground) level should be made	FLATS not exceeding two
	suitable for escape purposes in case of fire.	storeys
SC69	PART B: COOKING FACILITIES - Kitchens should be sited remote	,
	from the exits used for escape during a fire.	
SC70	PART B: Revised / Updated Approved Documents or British	
	Standards - There have been updates to fire safety guidance.	
	Your plan notes should be altered to state that "FIRE SAFETY:	
	BUILDING REGULATION COMPLIANCE SHALL BE MET BY	
	FOLLOWING GUIDANCE WITHIN CURRENT APPROVED	
	DOCUMENTS AS WELL AS ANY BRITISH STANDARDS / CODES	
	OF PRACTICE CITED THEREIN"	
SC71	PART B; INNER ROOM CONDITIONS: a room accessed only via	
	an inner room is not usually permissible unless certain	
	conditions are met which helps to safeguard the dwelling	
	occupants. Refer to Part B Vol2 (for otherthan dwelling houses	
) Paragraph 2.11 or Part B Vol1 (for dwelling houses)	
	Paragraph 3.7, for details of how to comply with fire safe	
SC72	design guidance. PART B: You are required to submit PROOF by way of	
30/2	manufacturers test certificates that show all your newly	
	provided FIRE doors achieve compliance with Approved	
	Document Part B (Appendix C).	
SC73	PART B:PASSIVE PROTECTION- Unprotected areas must be	
	justified to accord with Part B4.	
	1-	l.

SC74	PART B: EXTERNAL FIRE ESCAPE STAIRWAYS USED IN CASE OF	
	FIRE: 1. Stairs used as fire escapes more than 6m in height	
	should be protected from adverse weather. Protection should	
	prevent the build-up of snow or ice but does not require full	
	enclosure. 2. Fire resisting construction (minimum RE 30)	
	should be provided for any part of the building (including	
	doors) within 1800mm of the escape route from the foot of	
	the stair to a place of safety. This does not apply if there are	
	alternative escape routes from the foot of the external escape	
	stair. 3. Doors to the stair should be fire resisting (minimum E	
	30), except for a single exit door from the building to the top	
	landing of a downward-leading external stair. Refer to	
	Paragraph 2.17 ADB (B1) Vol1.	
SC75	PART C: Your site should be prepared, any vegetation and/or	
	contaminants removed.	
SC76	PART C: Cross flow sub floor ventilation shall be provided.	
SC77	PART C:Sub-floor ventilation shall be maintained to any	
	existing timber floors.	
SC78	PART C: DAMP PROOF COURSES & THERMAL BREAKS -New	
	windows and doors (controlled fittings) must be installed by	
	FENSA registered personnel or an appropriately qualified	
	person on suitable damp proof courses. Installation	
	certificates and thermal performance submitted to Building	
	Control Surveyors ltd. A Final Certificate cannot be issued	
	without this document.	
SC79	PART C: DPC'S to be lapped into DPM's. Provide cavity trays	
	above lintels (with end stops).	
SC80	PART C: Your proposals must comply with the above	
	requirements (as contained in Part C Resistance to	
	contaminants and moisture)	
SC81	PART C:Free text: See note below	
SC82	PART C:Free text: See note below	
SC83	PART D: TOXIC SUBSTANCES. Please submit information that	
	demonstrates your compliance with the above requirement.	
SC84	PART D: Free text: see notes below	
SC85	PART D: Free text: see notes below	
SC86	PART D: Free text: see notes below	
SC87	PART D: Free text: see notes below	
SC88	PART E: RESISTANCE TO SOUND -Submit information that	
	demonstrates compliance (resistance to sound- sound tests	
	will be required to prove compliance)	
SC89	PART E: RESISTANCE TO SOUND - Provide sound insulation to	
	party walls and to the new loft floor in compliance with Part E.	
SC90	PART E: RESISTANCE TO SOUND -Sound insulation	
	performance must not be reduced due to recessed lighting,	
	ducts, or other apertures in ceilings or walls.	
SC91	PART E: RESISTANCE TO SOUND - Sound testing reports (pre-	
	completion testing) must be carried out by ANC Registered	
	bodies only. Sets of test reports certificates submitted to	
	Building Control Surveyors ltd.	
	A Final Certificate cannot be issued without this document	
SC92	PART E: See note below	

SC93	PART F: Regulation 39 of the Building Regulations (Reg 39),	
	requires that within 5 days after completion of work involving	
	fixed ventilation systems proof that maintenance and	
	operational details of your installations have been given to the	
	building owners.	
SC94	PART F: VENTILATION -Submit full ventilation details specifying	
	compliant background, purge and trickle ventilation provisions	
	as appropriate. Mechanical extraction units shall be both fitted	
	and commissioned to confirm adequate performance.	
SC95	PART F: VENTILATION - Submit compliant ventilation details for	
3033	all sanitary conveniences provided (mechanical / natural)	
SC96	PART F: VENTILATION - All mechanical extraction shall be	
3630	ducted to the external air. Please note systems to be subject to	
	air flow rate testing to confirm ventilation and extraction to	
	meet current standards, information submitted to Building	
	Control Surveyors upon completion of the work.	
	NB No Completion/Final Certificate can be issued without this	
	document.	
SC97	PART G: Water efficiency calculations must be prepared and	
	submitted as part of this building regulation application	
	process.	
SC98	PART G: Confirm that fittings designed to prevent scalding	
	have been fitted to hot water supplies. Unvented hot water	
	storage systems must be installed by competent persons only,	
	installation test and commissioning certificates must be	
	submitted upon completion of the work.	
	Submit information that demonstrates compliance with the	
	above requirement to provide hot and cold water as	
	appropriate. NB No Completion/Final Certificate can be	
	issued without this document.	
SC99	PART G: Submit information that demonstrates compliance	
	with the above requirements as appropriate.	
SC100	PART G:	
SC101	PART G: Please confirm potable water supply to sinks where	
564.00	water will be drawn off.	
SC102	PART G:	
SC103	PART G:	
SC104	PART H: DRAINAGE- To meet the requirements H1 AND H3 the sanitary pipe work and drainage must comply with the relevant	
	clauses in section 1 and 3 of the approved document H or	
	BSEN 12056-2:2000, gravity drainage systems inside buildings,	
	and the current series and relevant parts of BS EN 752, Drains	
	and sewer systems outside buildings.	
SC105	PART H: Drainage must be provided with adequate rodding	
30103	access, for blockage clearance purposes.	
SC106	PART H: Any excessive drainage runs shall be provided with	
CC107	adequate ventilation (i.e. air admittance valves as appropriate)	
SC107	PART H: Drainage outfalls must be directed to underground	
CC100	drainage systems.	
SC108	PART H: The use of soakaways may not be permitted if ground	
	conditions are not suitable (i.e. not suitable where dense clay	
<u> </u>	is encountered within the ground)	

r		
SC109	PART H: It is your responsibility to obtain any necessary	
	consents if you intend to build over a public sewer. Please	
	note internal Access Chambers are not permitted by Statutory	
	Sewer Owner.	
SC110	PART H: Solid waste storage arrangements on your site have	
	not been shown. Submit information.	
SC111	PART H: You will be required to show that drainage tests have	
	been carried out of new drainage runs provided both above	
	and below ground to our satisfaction.	
SC112	PART H3: You are likely to need to consult the local water	
	utility company due to the proximity of your building	
	foundation to their sewer.	
SC113	PART H_	
SC114	PART H_To meet the requirement H1 AND H3 the sanitary	
	pipework and drainage must comply with relevant clauses in	
	section 1 and 3 of the approved document H or BSEN 12056-	
	2:2000, gravity drainage systems inside buildings, and the	
	current series and relevant parts of BS en 752, drains and	
	sewer systems outside buildings.	
	Drainage must be provided with adequate rodding access, for	
	blockage clearance purposes.	
SC115	PART H3- Rainwater drainage	
	Please confirm the roof rainwater drainage system directs	
	water away from the building structure via guttering and	
	rainwater down pipes,	
SC116	PART H_	
SC117	PART J_Location of any flues serving gas appliances shall be	Used where gas flues are
		located close to openings
	located in accordance with Approved Document Part J,	into a building (i.e
	located in accordance with Approved Bocament Fairty,	windows / rooflights),
		close to structures, close
	Diagram 34 (and associated Table).	to gutters, pipes
SC118	PART J- FLUES- You must provide access to all concealed flue	
	runs for maintenance and testing purposes.	
SC119	PART J- FLUES- must be fitted in a manner so as not to cause	
	any nuisance.	
SC120	PART J- FLUES- Condensation from boilers shall be made to	
	outfall to a position that does not cause nuisance outfalling to	
	the boiler manufacturers recommendations.	
SC121	PART J-FLUES- Boiler flues shall be located so as to minimise	
	any nuisance. Boiler flues shall be accessible for maintenance	
	and testing. Work to gas installations must be carried out by a	
	competent person (gas safety registered)	
	NB No Completion/Final Certificate can be issued without	
	this document.	
SC122	PART J- Appliances - Products of combustion (Oil fired / Gas	
	Fired) -Your plans do not show the position of any space	
	heating appliances or services That may emit products of	
	combustion . The position and installation of any flues must	
	not hinder means of escape for building occupants in case of	
	fire.	

SC123	PART J- (J3) - Warning release of carbon monoxide : Applies to	
	Residential dwellings - where a fixed combustion appliances	
	provided, appropriate provision shall be made to detect and	
	give warning of the release of carbon monoxide. Please show	
	position of detection equipment on your plans.	
SC124	PART J- (J6) Protection of liquid fuel storage systems : liquid	
	fuel storage systems and the pipes connecting them to	
	combustion appliances shall be so constructed and separated	
	from buildings and the boundary of the premises as to reduce	
	to a reasonable level the risk of the fuel igniting in the event of	
	fire in adjacent buildings or premises. J6 applies only to:(a)	
	fixed oil storage tanks with capacities greater than 90 L and	
	connecting pipes; and (b) fixed liquefied petroleum gas storage	
	installations with capacities greater than 150 L and connecting	
	pipes, which are located outside the building and which serve	
	fixed combustion appliances (including incinerators) in the	
	building.	
SC125	PART K- Any glazing in "critical locations" should break safely	
	or resist impact or be protected from impact. Please submit	
	details. Glazing used in critical locations" should conform to	
	BS6206:1981.	
SC126	PART K: [Stairs] STAIRWAYS - Your stairway must be	
	constructed so as to meet the above requirement (i.e. practical	
	width, geometry and materials). Handrails must be provided	
	with baluster spacings (no gaps greater than 100mm) that	
	comply. Please note for common stairs AD Part M Access into	
	buildings standard will apply.	
SC127	PART K: Landings are required at base and top of all stairway	
	flights. Landings to be not less than stairway width, squared.	
SC128	PART K: STAIRWAY of limited combustibility must be provided.	
SC129	PART K: External stairways must be provided with anti-slip	
	treads and or landings.	
SC130	PART K: Tread nosings are to be conspicuously marked.	
SC131	PART K: You must make sure that any openings or landings at a	
	height must be provided with suitably designed guarding to	
	prevent building users injuring themselves from falling (incl.	
	low window cills etc)	
SC132	PART K: Please provide further information to confirm	
	guarding across openings and floor voids. e.g. Guarding across	
	dormer door/window opening, stair wells etc. Performance of	
	guarding to be confirmed by a qualified structural Engineer. if	
	applicable.	
SC133	PART K: Please provide full stair design when available e.g. the	
	rise and going to meet guidance in Table 1.1 of Part K, pitch,	
	headroom height, handrail provision, width of flight and that	
	the stair includes a suitable landing at the top and bottom of	
	each flight.	
SC134	PART L: L1B (Existing buildings) Submit information that	USED ON DWELLINGS
	demonstrates compliance with requirement L1B Conservation	ONLY
	of Fuel and Power (Specifying materials, insulation thickness',	
	and U values to be achieved). e.g. New thermal elements -	
	Wall U value 0.28 W/m2K, pitched roof 0.16 W/m2K, flat roof	
	0.18 W/m2K, floors 0.22 W/m2K	
	0.10 W/IIIZK, 110013 0.22 W/IIIZK	

SC135	PART L: All glazing thermal performance values shall be	
	submitted (U Values) - Showing compliant thermal	
50126	performance provisions. PART L: Floor insulation details shall be submitted which show	
SC136	compliance. Showing compliant insulation provisions.	
SC137	PART L: Roof insulation details to be submitted. Showing	
30137	compliant insulation and appropriate ventilation provisions.	
SC138	PART L: You must make sure that you provide materials, which	
	meet the above requirements (Wall/roof/insulation and	
	performance of glazing). If appropriate you will need to justify	
	construction by the use of approved analysis/calculations	
	undertaken by a registered assessor. For domestic SAP for	
	commercial SBEM. SAP/SBEM analysis and EPC (energy	
	performance certificates) are required for all new dwellings.	
	NB No Completion/Final Certificate can be issued without	
	this document.	
SC139	PART L: Excessive glazing used - submit your proposals which	
	address this in compliance with Part L.	
SC140	PART L: (and Reg 40) Variations to material specified by your	
	architect or surveyor should be verified as still meeting the	
	above-mentioned requirements. You should check with your	
	professional designer in this respect. REGULATION 40 of the	
	Building Regulations requires within 5 days after completing	
	the work, that you submit PROOF that information about the	
	new fixed building services, maintenance and operations	
	requirements have been passed to the building owner.	
SC141	PART L:New glazing shall be manufactured to comply with U	
	Values shown in the approved documents. You are required to	
	submit performance information Completion (i.e. FENSA or	
	CERTASS supplier who can confirm Manufacturing and	
	performance details – i.e. glazing pane thickness, air gap, gas	
	fillings, thermal breaks etc)	
	No Completion/Final certificate can be issued without this	
SC142	document. PART L: Windows and doors in extensions should be limited so	USED ON DWELLINGS
30142	as not to exceed the sum of: a. 25% of the floor area of the	ONLY
	extension: plus b. The area of any windows or doors which, as	OIVET
	a result of the extension works, no longer exist or are no longer	
	exposed. More flexibility in the selection of thermal resistance	
	for building fabric and opening areas etc. is available by way of	
	compensatory features elsewhere in your design. Your	
	architects-surveyors should be able to offer you guidance i.e.	
	using area weighted U Value approach). Please note SAP	
	analysis will be required, calculation prepared by a qualified	
	Energy Assessor.	

SC143	PART L: internal plasters completely removed to existing	
	external walls -you are required to upgrade wall insulation as	
	appropriate in accordance with the approved documents.	
	Where works apply to less than 25% of the surface area	
	however reasonable provision could be to do nothing to	
	improve energy performance. (Note - if such an upgrade is not	
	technically or functionally feasible or would not achieve a	
	simple payback of 15 years or less, the element should be	
	upgraded to the best standard that is technically and	
	functionally feasible and which could be achieved within a	
	simple payback of no greater than 15 years)	
SC144	PART L - RETAINED THERMAL ELEMENTS -A building subjected	USED ON DWELLINGS
	to a material change of use or where an existing element is to	ONLY
	become part of the thermal envelope where previously it was	
	not e.g. as part of a loft or garage conversion where the space	
	is now to be heated shall meet the U values values shown in	
	Table 3 AD Part L1B. (You must clearly show how existing walls,	
	floors, roofs are to be provided with improved thermal	
	insulation -(unless you justify otherwise under para. 5.12 AD	
	L1B)	
SC145	PART L: Please confirm thermal performance minimum "U	
	Values" Wall 0.28 W/m2.K. Floor 0.22 W/m2.K. Flat and	
	pitched roofs 0.18 W/m2.K. Windows WER band C or better.	
	New and/or altered space heating systems must be installed in	
	accordance with the "Non domestic Heating Compliance	
	Guide" details can be found at:	
	Http://www.planningportal.gov.uk/uploads/br/non_domestic_	
	building_compliance_guide.pdf	
SC146	PART L: Please note gas boiler and appliances must be	
	installed by a person who is a member of a competent person	
	scheme, a notice confirming correct installation issued by the	
	relevant Competent Person Scheme must be submitted	
SC147	PART L: Your are required to submit Full SAP calculation for	
	design and as built dwelling units, in addition you must provide	
	Energy Performance Certificates (EPC) for each new dwelling.	
	Lifergy refrormance certificates (Life) for each fiew dwelling.	
	No Completion/Final certificate can be issued without this	
	document.	
SC148	PART L: You are required (Building Regulation 26) to calculate	
	the energy efficiencies for the new building by application of	
	SBEM, the calculation carried out by an approved assessor.	
	The calculation must be given to BCS prior to commencing the	
	building work with another calculation provide upon complete	
	that is relevant to the building constructed. The calculation	
	must include detail for building element "U values", the	
	heating and cooling services, energy efficient lighting and show	
	that heat gains in summer will be limited.	
	You are also required to provide an Energy Performance	
	Certificate (EPC) upon completion of the work in accord with	
	Building Regulation 29. Note a Final Certificate will not be	
	issued without the aforementioned documents.	

SC149	PART L: IMPROVING YOUR ENERGY RATING - You have an	
	opportunity during this development to provide good	
	thermally insulating construction, energy efficient fittings,	
	controls, and services. improved air tightness measures which	
	will help achieve lower running costs, Make sure you provide	
	your energy assessor with all the construction specifications	
	and as-built plans in order to achieve a good energy rating.	
	(SAP, EPC, SBEM)	
SC150	PART M: DWELLING - Doorways and corridor widths must	
	conform to the above requirement. Refer to diagram 1.2 &	
	Table 1.1 ADM. Your plans should be annotated accordingly in	
	order to assist your contractors.	
SC151	PART M: DWELLING - Approach to dwellings must comply with	
	Part M Access requirements. Levelled door thresholds must be	
	specified. Submit necessary information.	
SC152	PART M: DWELLING - Communal entrance must have an	
	accessible thresholds and a clear doorway width of 775mm (or	
	an appropriate compliant width)	
SC153	PART M: DWELLING - WC to be provided on principle entrance	
30133	level. Configure WC to meet requirements of Part M.	
SC154	PART M: Please confirm or not the "optional" requirements as	
30134	defined in Building Regulations M4 (2) and M4 (3) imposed as	
	part of the process of the granting of Planning Permission.	
	part of the process of the granting of Planning Permission.	
	Please provide an Access Strategy document to confirm	
	performance design with regard to the requirements of	
	Approved Document part M appropriate "optional" standard,	
	this should be submitted prior to commencing construction	
	work to enable correct application of construction standards.	
SC155	DART Mu Please provide an Access Strategy decument to	
30133	PART M:: Please provide an Access Strategy document to confirm performance design with regard to the requirements	
	of Approved Document part M appropriate standard, this	
	should be submitted prior to commencing construction work	
56456	to enable correct application of construction standards.	
SC156	PART M: (OPTIONAL REQUIREMENTS ASSOCIATED TO	
	PLANNING CONSENTS) Please submit full plan details and	
	relevant specifications that fully comply with the relevant Part	
66457	M guidance.	
SC157	PART M: HORIZONTAL AND VERTICAL CIRCULATION IN	
	BUILDINGS OTHERTHAN DWELLINGS- DIMENSIONAL ASPECTS	
	OF PASSENGER LIFT CAR - this has not been specified. This	
	should meet the criteria within Approved Document Part M	
	Vol2. Refer to para. 3.34 and diagram 11.	
SC158	PART M: Please provide a design access statement to confirm	
	AD Part M standards are to be constructed into your	
	development. The statement must confirm floor cover and	
	door threshold detail, door width, furniture and opening	
	criteria, corridor widths, facilities (W.C.s etc.) stair design and	
	electrical services as compliant.	
SC159	PART K: Any glazing in "critical locations" "should break safely	
	or resist impact or be protected from impact. Please submit	
1	details. Glazing used in critical locations" should conform to	
	BS6206:1981.	

SC160	PART K - CRITICAL LOCATIONS - There is a requirement to apply	
	manifestations to glazing both internally and or externally in	
	shop, showrooms, offices, factories, public or other non-	
	domestic buildings. Refer to Section 7 of AD K. and submit	
	your designs.	
SC161	PART K [Stairs] STAIRWAYS Your replacement (new)	
	staircase must meet guidance shown in Part K, Table 1.1. Your	
	replacement staircase i.e. Its position, type, geometry and	
	fabrication materials selected must not worsen stairway	
	accessibility. If you propose to store items under stair flights	
	then you will be required to provide fire protection to the	
	underside of the stairway as well as a fire door and partitioning	
	to contain any possible fire. The stairway should be fabricated	
	to allow practical everyday use including wide enough to	
	accommodate movement of large objects or furnishings, and	
	allow adequate headroom clearance.	
SC162	PART L: L2A AIR PRESSURE TESTING - Conservation of fuel and	
	power in new buildings other than dwellings - All buildings that	
	are not dwellings (including extensions which are being treated	
	as new buildings for the purposes of complying with part L	
	must be subject to pressure testing (any exceptions are	
	contained within paragraph 3.12 which the designers must	
	address). All thermal elements and controlled fittings shall	
	comply with Part L requirements.	
SC163	PART P: Electrical work must be carried out by a qualified	CLAUSE NOT TO BE USED
	electrician, Who is able to self certify the work (design, install,	ON COMMERCIAL
	test) - we will check their validity of electrical certificate	BUILDINGS !!!
	submitted to building control.	
	No Completion/Final certificate can be issued without this	
	document.	
SC164	PART P: work you altered to electrical systems must be carried	NOT TO BE USED ON
	out by a person qualified and registered with a "Part P	COMMERCIAL BUILDINGS
	competent person scheme, that person must submit a B 7671	!!!
	electrical installation certificate to the owner and also to their	
	"Part P registration scheme". A Building Regulation compliance	
	certificate issued by the "Part P registration scheme" must be	
	submitted to Building Control Surveyors upon completion of	
	the work. No Completion/Final Certificate an be issued without	
	this document.	
SC165	PART P ? - Your plans makes reference to an Approved	
	Document that maybe inappropriate. Consider instead citing	
	BS7671 18th (or above) Edition : Requirements for electrical	
	installations.	
SC166	PART P:	
SC167	PART Q-SECURITY : Please confirm provision to resist	CLAUSE USED FOR NEW
	unauthorised access to any dwelling, confirm the design of	BUILD DWELLINGS OR
	secure door sets, ground floor , basement and other easily	DWELLINGS FORMED BY
	accessible windows (including easily accessible roof lights)	CHANGE OF USE ONLY !!!
	should be "secure windows" that meet security requirements	
	of B.S. PAS 24:2012.	
	Main entrance doors should include a viewer unless other	
	means exist to see callers, the same door should include a door	
	chain or limiter.	
<u> </u>	1	1

CC1C0	DART O SECURITY - DWELLINGS flata to masside	CLALICE LICED FOR MENA
SC168	PART Q-SECURITY : DWELLINGS- new flats: to provide	CLAUSE USED FOR NEW
	reasonable provision to resist unauthorised access into the flat.	BUILD DWELLINGS OR
	Submit door and window schedules which demonstrates your	DWELLINGS FORMED BY
	compliance.	CHANGE OF USE ONLY !!!
SC169	PART R - If you are erecting a new building or undertaking	
	major renovation works to a building then you must specify	
	your physical infrastructure provisions for high-speed	
	electronic communications networking.	
SC170	Blank	
SC171	REG7- People were responsible for building work (e.g agent,	
	designer, builder or installer) must ensure that the work	
	complies with all applicable requirements of the building	
	regulations. The building owner may also be responsible for	
	ensuring that work complies with the building regulations. If	
	building work does not comply with the building regulations,	
	the building owner may be served with an enforcement notice.	
SC172	PLANS CONTAIN INSUFFICIENT DETAILS : Not all non	
	compliance's may have been determined under this check of	
	your submitted plans. You may be still required to alter any	
	non compliant work carried out on site. You are advised to	
	consult with our Surveyors during site inspections for advice.	
SC173	REG7- RESTRICTED MATERIALS - Non-combustible materials in	
	external walls of tall buildings. The Building Regulations restrict	
	the use of combustible materials in the external walls of	
	certain buildings over 18m in height. Refer to regulation 7(2) of	
	the Building Regulations and to Approved Document B: volume	
	2, part B4 for details.	
SC174	REG7- Materials and workmanship 7. (1) Building work shall be	
	carried out— (a) with adequate and proper materials which—	
	(i) are appropriate for the circumstances in which they are	
	used, (ii) are adequately mixed or prepared, and (iii) are	
	applied, used or fixed so as adequately to perform the	
	functions for which they are designed; and (b) in a	
	workmanlike manner.	
SC175	NO OBJECTIONS: Your plans have been checked and I have no	
	objections to your proposals. Please note that compliance is	
	also checked on site as the work progresses by our surveyors.	
SC176	PART B3 and or B4 : Your plans indicate various references to	
	external (proprietary) surface claddings. Please submit	
	information about your proposed claddings in particular their	
	performance in limiting surface spread of flame, and any	
	measures required to fire stop any concealed voids. Any	
	prefabricated assemblies (sandwich panels, composites, or off	
	site-manufactured building envelope components must be	
1	accompanied by associated fire related performance as	
	appropriate to their intended use.	
	appropriate to tricir interface use.	

INFO FIRE BRIGADE CONSULTATION: We are required under statute to submit your proposals to the Fire Authority. Their comments if any shall be forwarded to you in due course. Please note the law pursuant to Reg. 13 (5)(b) of the Approved Inspector Regulations, does not permit us to issue our FINAL CERTIFICATE until the Fire Authority have been consulted. As an Approved Inspector I am required to take regard of any views the Fire Authority express; and (b) As an Approved Inspector shall not give a plans certificate or a final certificate until 15 days have elapsed from the date on which we have consulted the Fire Authority, unless they have expressed their views to us before the expiry of that period. INFO1 Your plans makes reference to numerous RESIDENTIAL related clauses please remove them. INFO2 Your plans makes reference to numerous COMMERCIAL related clauses please remove them. INFO3 Regulation 38 : FIRE SAFETY INFORMATION - You are required to have prepared all fire safety related information to pass on to the building owners pursuant to Regulation 38- Building Regulations. INFO6	REGULATION 17 (Reg 17 Approved Inspectors Regulations) -	
	Events causing initial notice to cease to be in force. YOUR	
	CLIENT MUST BE ADVISED OF THIS ASPECT OF THE LAW.	
	(1) Where a final certificate given in respect of work described	
	in an initial notice is rejected, the initial notice shall cease to be	
	in force in relation to the work described in the final certificate	
	on the expiry of a period of four weeks beginning with the date	
	on which notice of rejection is given.	
	(2) Paragraph (3) applies where work described in an initial	
	notice includes the erection, extension or material alteration of	
	a building, and—	
	(a)the building or, as the case may be, the extension or any	
	part of the building which has been materially altered is	
	occupied, and	
	no final certificate is given.	
	(2) The initial notice shall seem to be in force.	
	(3) The initial notice shall cease to be in force in relation to the	
	building, extension or part of a building which is occupied—	
	if the building is a relevant building as defined by regulation 12(6)(a), except where it contains only flats and common parts	
	for those flats, on the expiry of a period of four weeks	
	beginning with the date of occupation; and in any other case,	
	on the expiry of a period of eight weeks beginning with the	
	date of occupation.	
	(4) Where work described in an initial notice involves a	
	material change of use of a building, and—	
	no final certificate is given, and that change of use takes place,	
	the initial notice shall cease to be in force in relation to that	
INFO7	Reg 17 - THE BUILDING OWNER SHOULD BE SO ADVISED : That	
	there are legal events that can cause our Initial Notice (IN) to	
	the local council to automatically cease to have effect	
	automatically cancelling our IN under REGULATION 17 of the	
	Approved Inspector Regulations. This occurs when you have	
	occupied your building project before we have issued our	
	FINAL CERTIFICATE.	

INFO8	Extent of watermist system protection Water mist system	USED ON DWELLINGS
	protection should be provided in all parts of the dwelling, with	ONLY
	the exception of the following areas, which may be excluded	
	unless required by a fire strategy or risk assessment:	
	a) bathrooms fitted with a door and with a floor area of less	
	than 5 m2; b) cupboards and pantries fitted with doors and	
	with a floor area of less than 2 m2, and rooms in which the	
	smallest dimension does not exceed 1 m, where the walls and	
	ceilings are covered with non-combustible or limited-	
	combustible materials;	
	c) non-communicating, attached buildings such as garages,	
	boiler houses, d) crawl spaces; e) uninhabited loft/roof voids;	
	f) ceiling voids; g) external balconies permanently open to the	
	outside.	
	A fire strategy or risk assessment might demonstrate that	
	extensive spread of fire or smoke, particularly between rooms	
	and compartments, is likely to take place and therefore that	
	the fire risk in the area is such that water mist coverage is	
	necessary. Proposals involving these systems must be	
	accompanied by an independently prepared Fire Strategy	
	Report.	
INFO9	PRE-COMPLETION DOCUMENTATION : You will be required to	This clause must be sent
	sign our PROJECT COMPLIANCE DOCUMENT FORM which	out on every plan check
	addresses Regulations 38 (Fire Safety Information), Regulation	
	39 (Ventilation), Regulations 40 (Conservation of fuel and	
	power) - confirming that you have provided all necessary	
	information to the building owner.

Definition of a material alteration

Regulation 3(2) of the Building Regulations 2010 defines a material alteration as:

Regulation 3(2) An alteration is material for the purposes of these Regulations if the work, or any part of it, would at any stage result—

- (a) in a building or controlled service or fitting not complying with a **relevant requirement** where previously it did; or
- (b) in a building or controlled service or fitting which before the work commenced did not comply with a relevant requirement, being more unsatisfactory in relation to such a requirement.

Regulation 3(3) In paragraph (2) "relevant requirement" means any of the following applicable requirements of Schedule 1, namely—

- Part A (structure)
- paragraph B1 (means of warning and escape)
- paragraph B3 (internal fire spread—structure)
- paragraph B4 (external fire spread)
- paragraph B5 (access and facilities for the fire service)
- Part M (access to and use of buildings).
